

# MaxYield™

## ADVANCED LINEAR NESTING SOFTWARE

MaxYield software is an advanced linear nesting program designed to calculate cutting lists to efficiently cut the specified list of parts from available stock. It's a "one dimensional" nesting program in that it's only concerned with length. This means that MaxYield can be used in any application where known lengths of material must be cut from available stock. Applications include structural steel and pipe, as well as flat, rod, or bar stock.

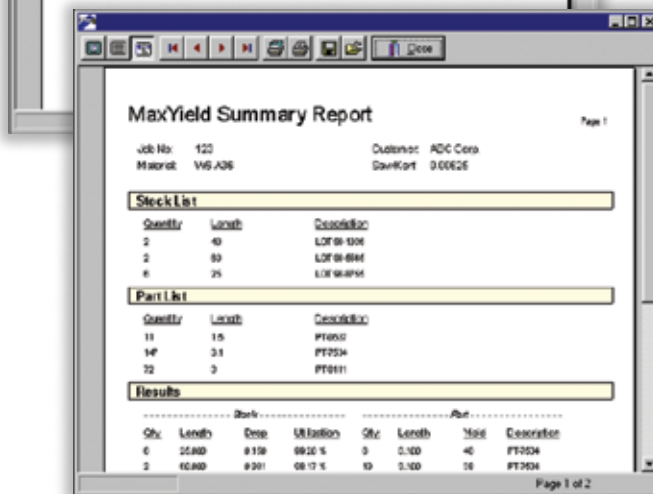

### INCREASE PROFITS

MaxYield helps avoid scrap, reduce programming time, material handling, and production time to improve company profitability. MaxYield's built-in editor allows easy creation and change of parts lists to be nested and stock to be used to calculate a cutting list. For more advanced users, parts and stock lists can be created outside of MaxYield. This allows easy integration with company material management systems like JIT (Just-In-Time) and MRP (Material Resource Planning). With MaxYield linear nesting software, the material utilization of the same list of parts with different stock lists can quickly be evaluated. What was once a tedious task can now be accomplished in seconds!

### STANDARD FEATURES

- Nest up to 1000 different parts at a time
- Built-in editor to create and change lists
- Supports inch or metric lengths
- Import/export stock and part lists
- Printed cutting list ready for production use
- Utilization and "drop" size for each cutting list
- Stock used and utilization summary information

### OUR COMMITMENT

MTC Software provides your business with the industry's best software solutions, which are continually being developed to incorporate the latest technology. We possess an experienced and dedicated team of professionals who understand the industries we serve and are available to help you use MaxYield effectively, now and in the future.

By investing in MTC Software, like thousands of other companies worldwide over the past 20+ years, you can feel comfortable that you're partnered with a company that measures its success by ensuring yours.
